

☒ InfluenceLab – MVP DOCUMENT (ENGLISH)

1. Product Vision

InfluenceLab is an AI-powered influencer coaching app that helps creators improve their content **before publishing**.

Instead of only analyzing content, InfluenceLab:

- Acts as an **AI Influencer Coach**
- Simulates **real audience reactions** using personas

*"We don't just analyze your content.
We let your audience react to it before you post."*

2. Problem

Most aspiring influencers:

- Post consistently but don't grow
- Don't understand why their content fails
- Confuse **personal taste** with **audience perception**

Existing tools:

- Show numbers, not meaning
- Give generic advice

- Don't simulate real audience reactions
-

3. Target Users

- Aspiring influencers (0–20K followers)
 - Instagram-first creators
 - Users who want clear, actionable, honest feedback
-

4. Supported Content (MVP)

- Image + Caption
 - Video + Caption
 - Platform: Instagram only
-

5. Core Concept: Dual Intelligence System

InfluenceLab has two AI layers:

5.1 AI Influencer Coach (Non-Persona)

- Acts like an expert social media coach
- Gives platform-agnostic best practices

- Focuses on:
 - Hook quality
 - Storytelling
 - Visual impact
 - Clarity
 - Growth potential

Example feedback:

*"This looks like a personal post, not influencer content."
"The hook is weak; most users would scroll past."*

5.2 Audience Persona Simulation

Users select a predefined audience persona.

The AI reacts as if it were that audience, providing:

- First impression
- Emotional reaction
- Likely action (like, save, skip, comment)

Example persona reaction:

*"This feels too salesy for me."
"I don't feel personally addressed."*

6. User Flow (MVP)

1.
Upload content (image or video)
 2.
Add caption
 3.
Select platform (Instagram)
 4.
Choose feedback mode:
 - AI Coach
 - Persona Simulation
 5.
Receive feedback
 6.
Improve caption
 7.
Re-check perception
-

7. Persona System (MVP Scope)

Included:

- Predefined personas only
- One persona per analysis
- Short, emotional reactions

Example Personas:

- 25–45 Stay-at-home Moms
 - 18–24 Gen Z Students
 - 30–40 Busy Professionals
 - 20–35 Fitness Enthusiasts
-

8. Output Structure

Each analysis returns:

- Key issues
 - Why this content fails or succeeds
 - Up to 3 actionable improvements
 - Persona-optimized caption rewrite
-

9. Iteration Loop (Core Value)

Users can:

- Edit their caption
- Re-run AI Coach and persona feedback
- See how perception changes

This loop teaches **audience empathy**, not just optimization.

10. What's NOT in MVP

- Instagram API integration
 - User accounts / login
 - Multiple persona comparisons
 - Historical analytics
 - Viral prediction claims
-

11. Monetization (Soft Start)

- Free: 1 analysis per day
- Premium:

- Unlimited analyses
- Advanced personas
- Deeper feedback

12. Success Metrics

- First-time user retention
- Repeat analysis usage
- User feedback:

"Now I understand what I'm doing wrong."
